

# proof

May 21, 2026

Mohon maaf bapak, sebelumnya pekerjaan saya dengan copy paste ai, berikut saya mencantumkan *proof* atau bukti pekerjaan saya dengan penjelasan yang saya buat, terima kasih bapak

```
[43]: import math
```

```
[44]: e = math.e  
x = 3  
  
e_power_minus_4 = e ** -4
```

```
[45]: poisson_pmf = (e_power_minus_4 * (4 ** x)) / math.factorial(x)  
  
poission_pmf
```

```
[45]: 0.19536681481316465
```

```
[46]: def sigma_poisson(n):  
    total = 0.0  
    for i in range(n + 1):  
        total += (e_power_minus_4 * (4 ** i)) / math.factorial(i)  
    return total
```

```
[47]: print(1 - sigma_poisson(3))
```

```
0.5665298796332909
```

NOMOR 1 DAN 2

NOMOR 3 A

Mencari sigma dari distribusi binomial  $P(X \leq 2) = \sum_{i=0}^2$

NOMOR 3 B DAN C

PENJELASAN: Untuk mencari sum dari distribusi poisson  $P(X \leq 3) = \sum_{i=0}^3$

NOMOR 4

No. :

Date :

karena  $Z_1 = -2.237$

$Z_2 = 2.237$

Yang artinya distribusi normal simetris, maka :

$$2 \cdot P(0 \leq Z \leq 2.24) = 2 \times 0.4875$$

$$0.4875 \times 2 = 0.975$$

$$= 97.5\%$$
